1. Display the first 10 rows from the table.
2. Find the total number of employees in the company.
3. List all unique departments.
4. Show how many employees have left the company and how many are still working.
5. Retrieve the list of employees who work overtime.
6. Find the average monthly income of all employees.
7. Identify employees whose number of companies worked is missing (NULL).
8. Find the employee(s) with the maximum monthly income.
9. Count the number of employees by gender.
10. List all employees who have just joined (YearsAtCompany = 0).
11. Calculate the attrition rate (%) by department.
12. List the top 10 employees with the highest total working years.
13. Group employees into tenure categories (<1yr, 1–3yr, 4–6yr, 7+yr) and count employees in each.
14. Find the average monthly income by job level and attrition status.
15. Identify the top 5 job roles with the highest number of employees who left.
16. List employees who left the company within their first year.
17. Calculate each employee's approximate new monthly compensation after applying their salary hike percentage.
18. Count employees grouped by overtime status and attrition.
19. Display the top 10 employees who attended the most training sessions last year.
20. Rank employees by total working years (most experienced = rank 1).
21. For each department, find employees whose monthly income is in the top 25% of that department.
22. Divide employees into 10 income deciles and find attrition rate for each decile.
23. Create a simple risk score based on tenure, performance, overtime, and work-life balance — and list the top 50 high-risk employees.
24. Create a summary view showing, for each department and job level: total employees, number of leavers, attrition rate, and average monthly income.
